

GLS-150 SERIES

High Speed CNC Turning Centers

GOODWAY MACHINE CORP.

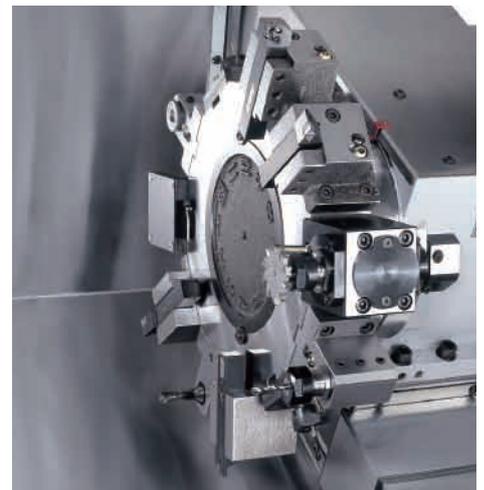

HIGH SPEED CNC TURNING CENTERS

Packed with industry leading technology and top quality components, the Goodway GLS series turning centers combine power, strength, and speed to bring you The Ultimate Machining Power®. These high speed machines will easily accomplish the demanding turning applications of today and tomorrow. Furthermore, with optional live tooling, C-axis, and Y-axis, milling, turning applications can be completed in one single machine.

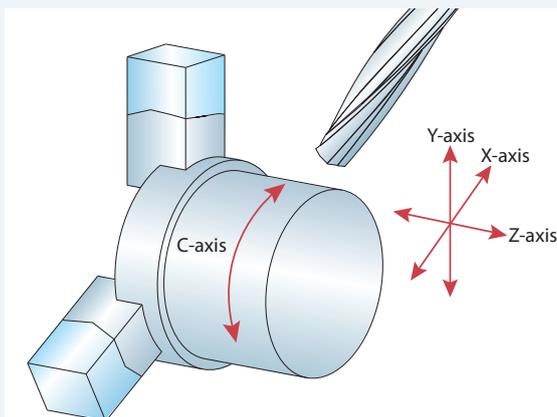

(GLS-150Y model shown with optional accessories)

- ▶ 30° slant-bed design provides smooth chip disposal and easier operator access.
- ▶ Steel way covers and special steel wipers molded with industrial strength rubber are used for durability.
- ▶ Fully enclosed splashguards keep chips and coolant contained for a safe clean working environment.
- ▶ The auto lubrication system delivers metered amounts of lubrication to the slide ways, ball screws, and vital components. Distribution is automatically shut off during idling to prevent waste.

- ▶ Live tooling and C-axis control capabilities on the GLS series allow the machine to perform multiple tasks on a work piece, such as turning, milling, drilling and tapping. This can save manpower and reduce cycle time, while reducing accuracy lost, which will occur if the part is moved from one machine to another.

- ▶ Y-axis models perform virtually the same way as machining centers equipped with 4th-axis rotary tables, but with the benefit of built-in turning capability. The X, Y, Z axes are like that of a machining center, while the C-axis acts as the 4-axis. This configuration replaces a turning center and machining center equipped with 4th-axis with one machine, thus, saving money, time, floor space, manpower and fixture costs, while reducing accuracy lost by eliminating the part from being moved to another machine.

MAXIMUM STRENGTH CONSTRUCTION

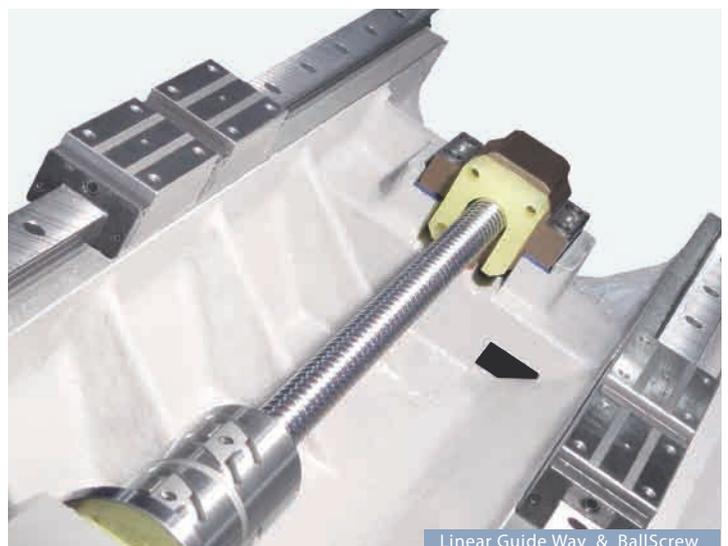

1
2

Built to withstand years and years of rigorous high production turning, the heavily ribbed, one-piece, thermally balanced bed and casting parts are of “Meehanite” casting. The 30 degrees true slant bed design further provides superior support for the headstock, turret, and tailstock, thus, creating the rigidity needed for long-term high precision turning and efficient chip removal.

(Casting structure of GLS series shown)

- ▶ Major structural components have been combined into one solid platform. The low center of gravity 30° slant bed design provides the most rigid foundation possible for the headstock, turret, and tailstock.
- ▶ By using Finite Element Methods (FEM), optimal reinforce ribbings are directly cast into the one-piece bed structure. Mechanical rigidity has been increased by more than 30% when compared to conventional designs. The GLS series is capable of performing heavy-duty turning and maintaining long-term high-precision accuracy. More rigidity also means extended tool life.

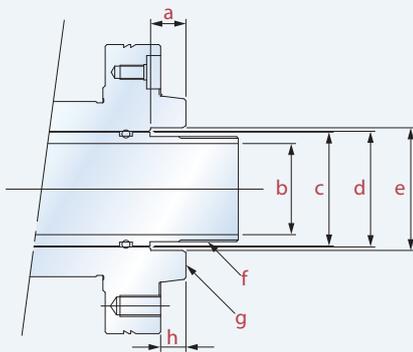

Linear Guide Way & BallScrew

ULTIMATE TURNING POWER

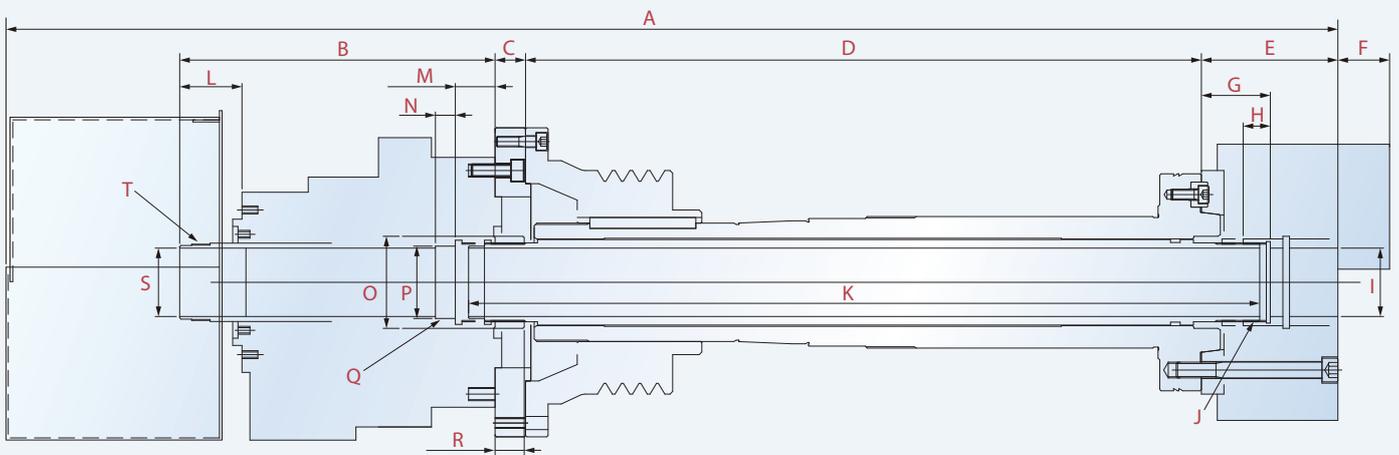

- ▶ The heavy-duty headstock is of one-piece casting reinforced with heat dispending fins.
- ▶ Standard rigid tapping feature provides high-speed precision tapping without the use of floating tap holders. Set-up is easier and depth of thread more accurate, permitting maximum productivity for tapping operations.
- ▶ The precision direct belt drive system provides greater spindle control, flexibility and serviceability. Pulley ratios fine tune the motor's maximum RPM to match the spindle's maximum RPM, which result in full output at the lowest RPM possible. Thus, utilizing the full potential of the spindle motor for maximum cutting power.

Unit : sec.

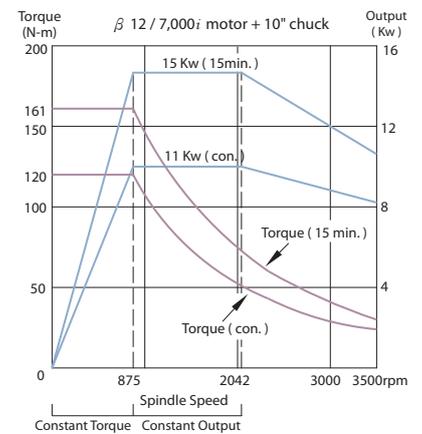

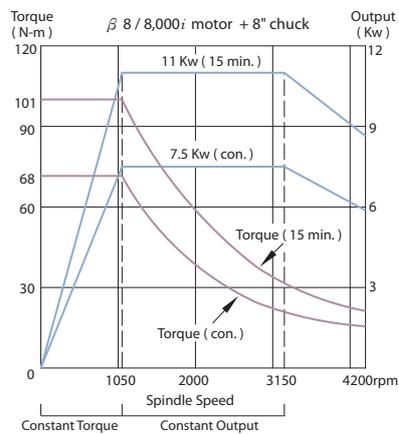

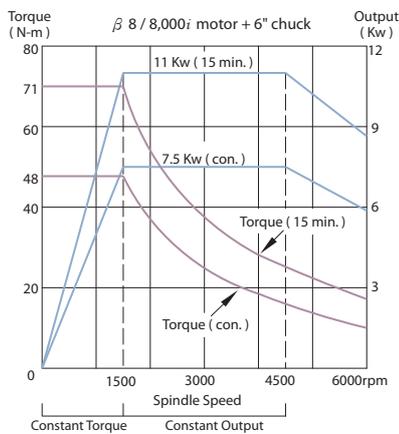

► GLS-150 models are available with built-in spindle motors, which eliminate traditional belts and pulleys. This advanced system provides faster spindle response, reduces vibration and power loss, which translate to faster cycle times, higher accuracy, and lowers maintenance costs.

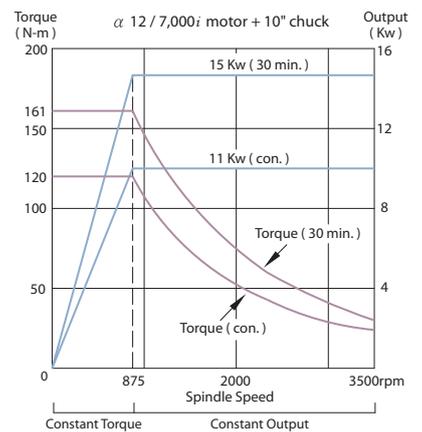

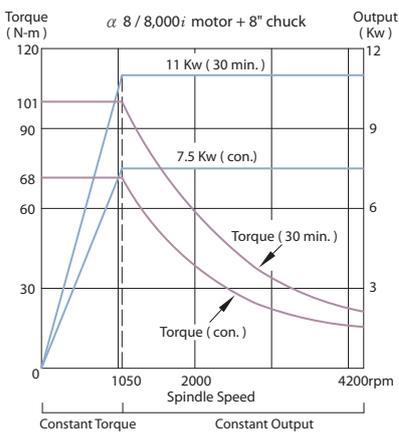

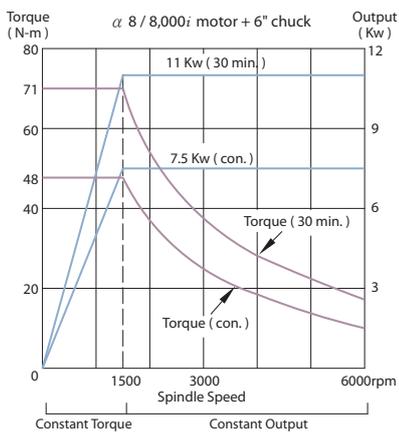

(Built-in spindle construction)

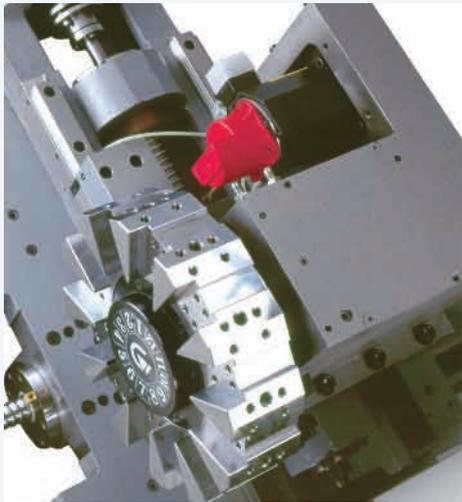

2-Axes models

Live tooling models

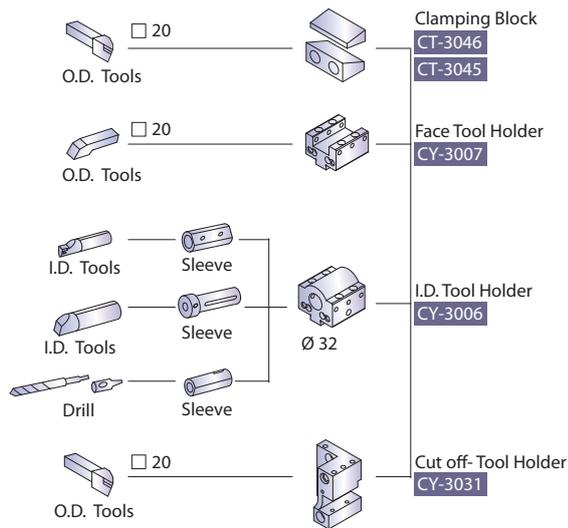

ADVANCED TURRET TECHNOLOGY

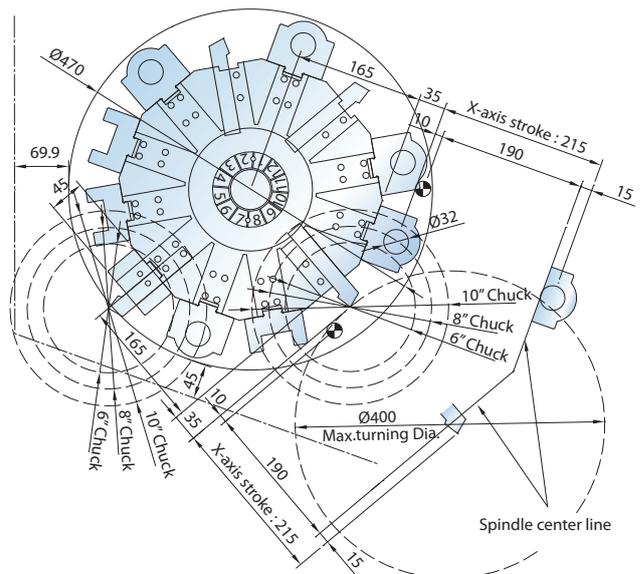

- ▶ A high-speed servo motor indexing system provides the 10 or 12-station turret with a 0.2 sec. indexing time. Large diameter high precision curvic couplings and hydraulic clamping are used to enhance tool indexing accuracy and turret disk rigidity.
- ▶ The standard 10-station turret clears 8" diameter work holding devices without interference while the 12-station turret clears 6" diameter devices.

Work Range

5

6

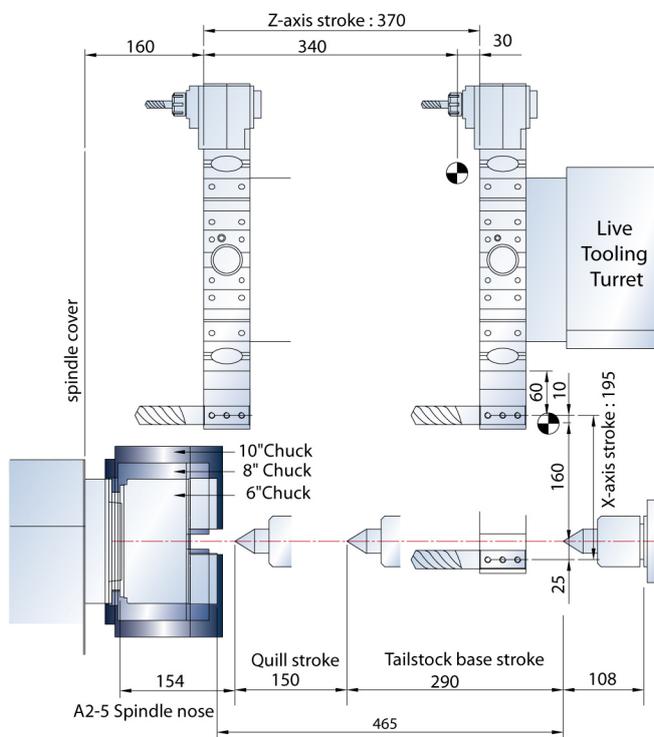

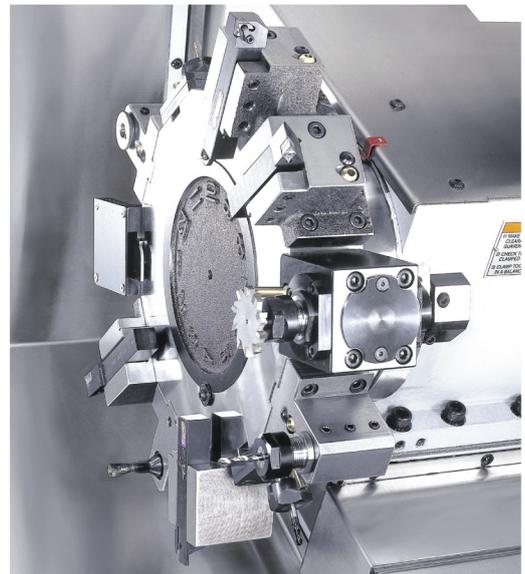

- The standard hydraulic tailstock uses live centers to provide support for long work pieces. Quill pressure is adjustable and movement is programmable.

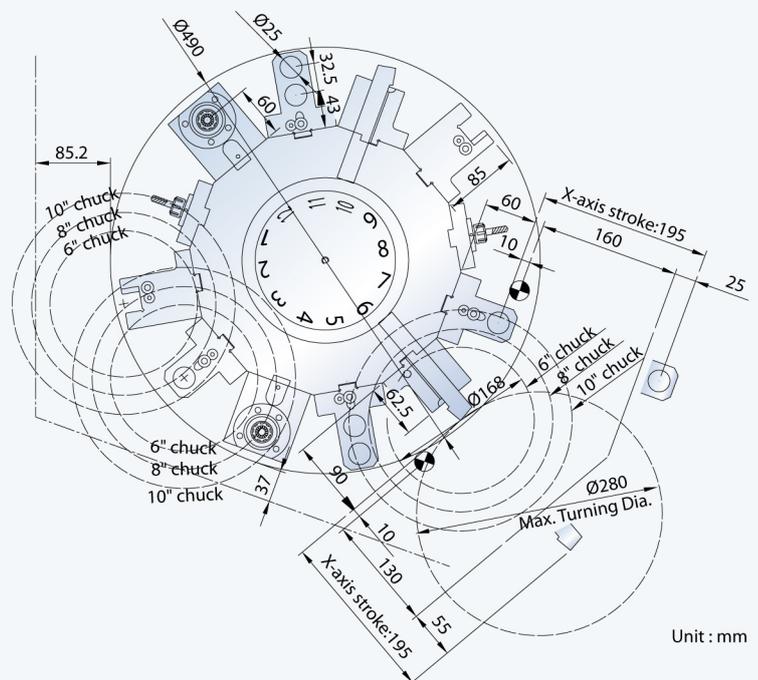

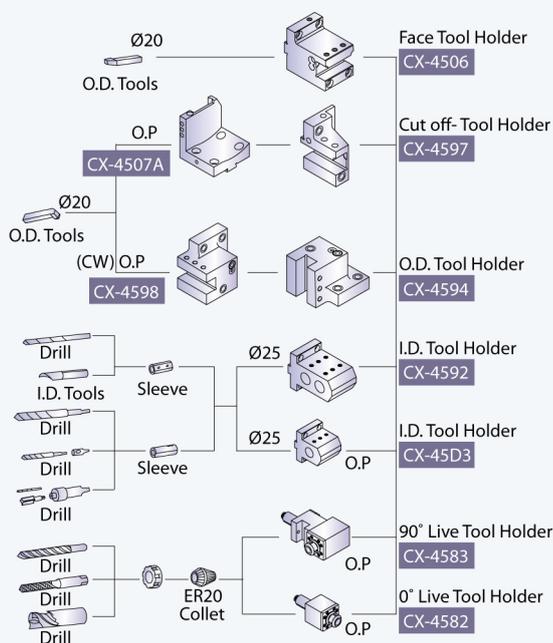

- The optional servo driven tailstock uses a servo motor and ball screw to position the tailstock and generate pressure to support the work piece. Pressure against a work piece is adjustable by increasing or decreasing the load of the servo motor, which can be programmed to provide variable and precise pressure during the machining process. This type of tailstock can also be used to drill the work piece during the OD turning process.

LIVE TOOLING TURRETS

- ▶ Live tooling and C-axis control capabilities on the GLS series allow the machine to perform multiple tasks on a work piece, such as turning, milling, drilling and tapping. This eliminates manpower and cycle time, while reducing accuracy lost, which will occur if the part is moved from one machine to another.
- ▶ The 12-station GOODWAY live tooling turret offers 6 stations available for live tooling.
- ▶ GOODWAY live tooling turret utilizes advanced servo indexing technology to achieve 0.2 second indexing time for adjacent stations and 0.5 second for stations at the opposite end of the disk.

- ▶ With the latest technology, live tooling is driven by an AC servo motor to provide ample power, in the form of torque. Now, even the toughest of jobs may be tackled without a sweat.

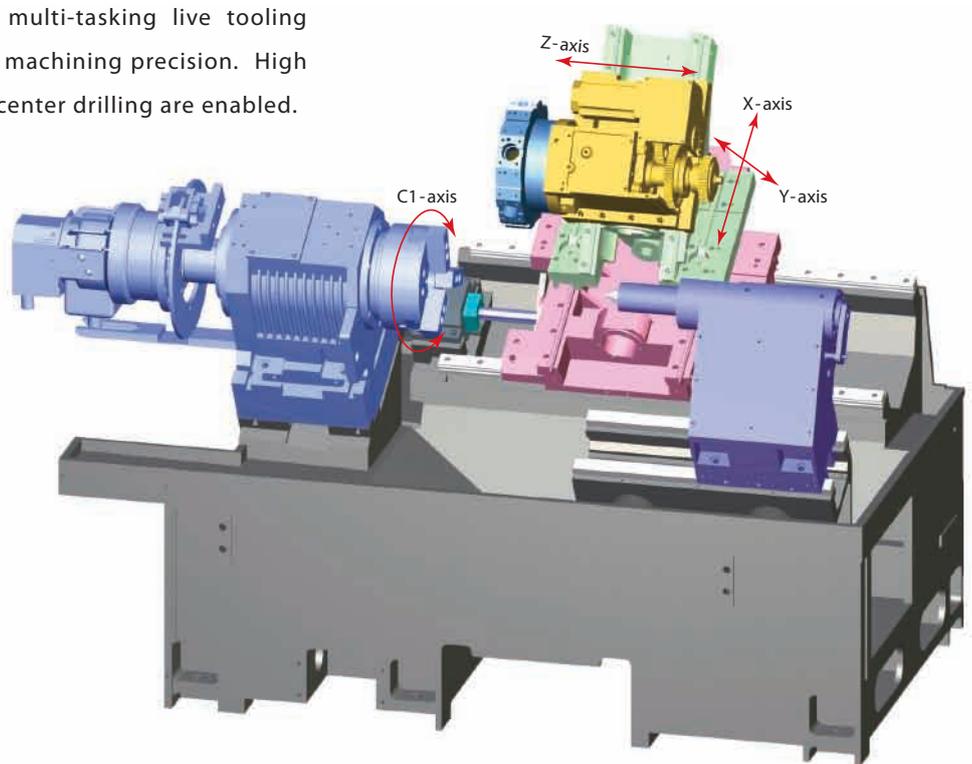

Unit : mm

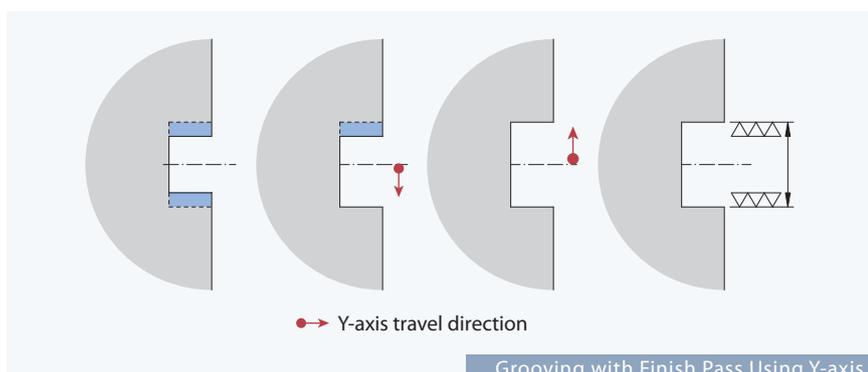

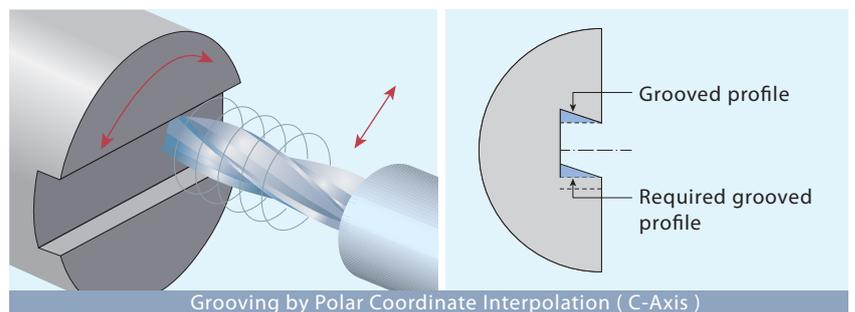

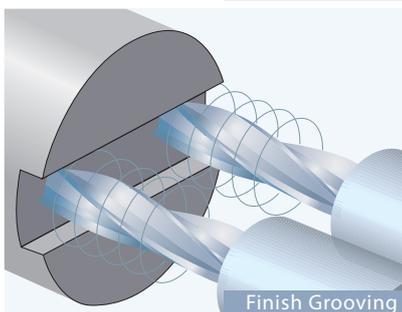

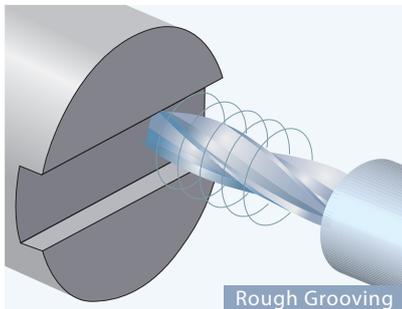

Y-AXIS MACHINING CAPABILITY

► Y-axis control further enhances multi-tasking live tooling capabilities and improves various machining precision. High precision grooving and X-axis off-center drilling are enabled.

► With an abundant amount of Y-axis travel, 70 mm= ± 35 mm (2.75" = ± 1.37 "), a wide variety of parts may be efficiently machined.

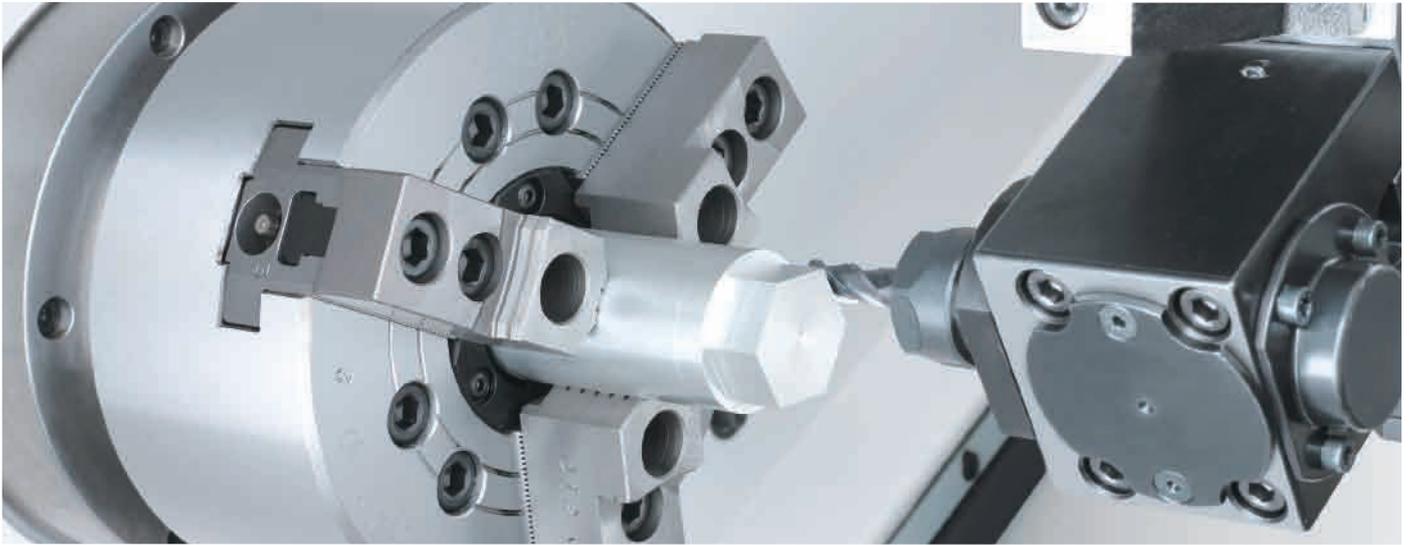

► On Y-axis equipped machines, the turret is mounted on a secondary 30 degrees wedge saddle on top of the X-axis slide. Guide ways are widely spaced for maximum strength.

► Grooving with Y-axis control produces grooves with higher accuracy.

MACHINING PERFORMANCE

Machining Capability

	Tools	Spindle Speed (rpm)	Feedrate (mm/min)	Cutting Speed (m/min)	Cutting Depth (mm)
Drill	Ø13 HSS	650	65	26.5	N/A

Raw Material : S45C Testing Model : GLS-150M

Live Tooling Turret Specification

Drive Motor Power	1.2 kw (1.6 HP)
Drive Motor	FANUC β 8 / 3000 is
Max. Tapping Capacity	M8 * P1.25
Max. Milling Capacity	Ø12 * 10
Gear Ratio	22 : 15

GOODWAY Multi-tasking machine can perform the functions below in one setup :

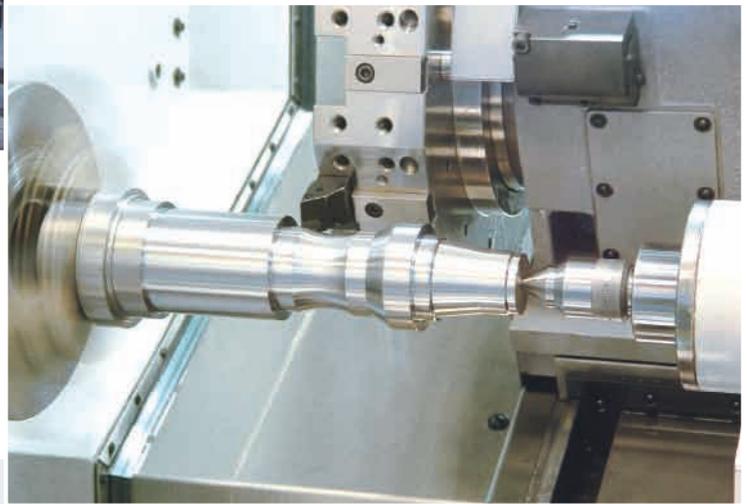

Sample Work Pieces

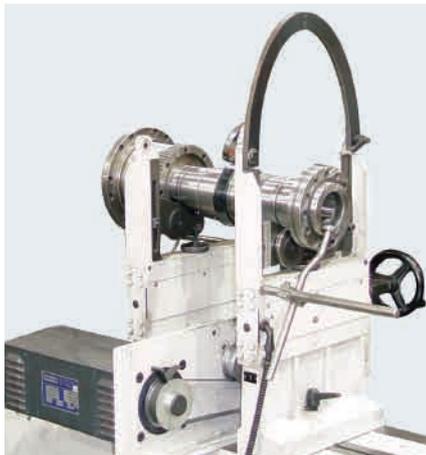

PEAK QUALITY ASSURANCE

- ▶ Before leaving the assembly line, all machines must pass critical testing including actual cutting, laser inspection and more.
- ▶ All machines are built with strict factory ISO 9001 Q/C regulations.

- ▶ For top component precision, Goodway utilizes top-end measuring and balancing equipment such as ZEISS 3D measuring system, BL high precision dynamic balancer and many more.
- ▶ All machines undergo preprogrammed test runs of 100 hours or more before shipment.

FEATURES

Chip Conveyor

- ▶ The standard chip conveyor features adjustable timers that allow the operator to set operation intervals according to the amount of chips generated by the machine. Thus, reducing coolant loss to a minimum.

Built-in lub. oil collection system

Tri-color status light

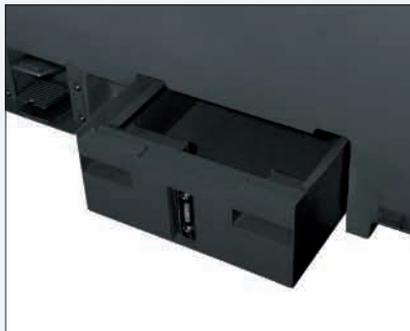

3-Jaw chuck w/ Soft Jaws x 1 set

Coolant Pump

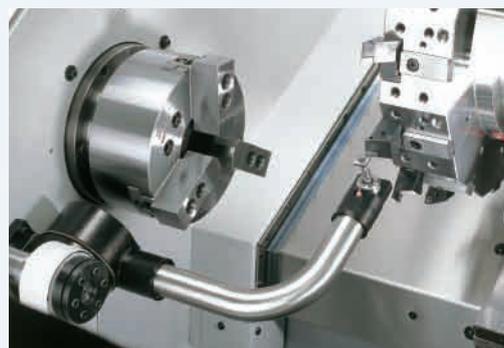

Coolant Tank

- ▶ Coolant system features a roll-out coolant tank for easy maintenance and high-pressure coolant pump for increased cooling power.

Tool Setter

- ▶ The optional Renishaw HPMA tool presetter utilizes a motorized arm to lower the tool probe into position. An auto tool check function further increases tool touch-off efficiency.

Load Monitoring

- ▶ The optional load monitoring function is used to detect abnormal load of tools by monitoring the variation in spindle motor and servo motor loads during the cutting process. When abnormal loads are detected, the machine will stop at program end (M30) or immediately (feed hold status) according to tool life value or tool break value respectively.

ENHANCED AUTOMATIONS

Loading / Unloading Systems

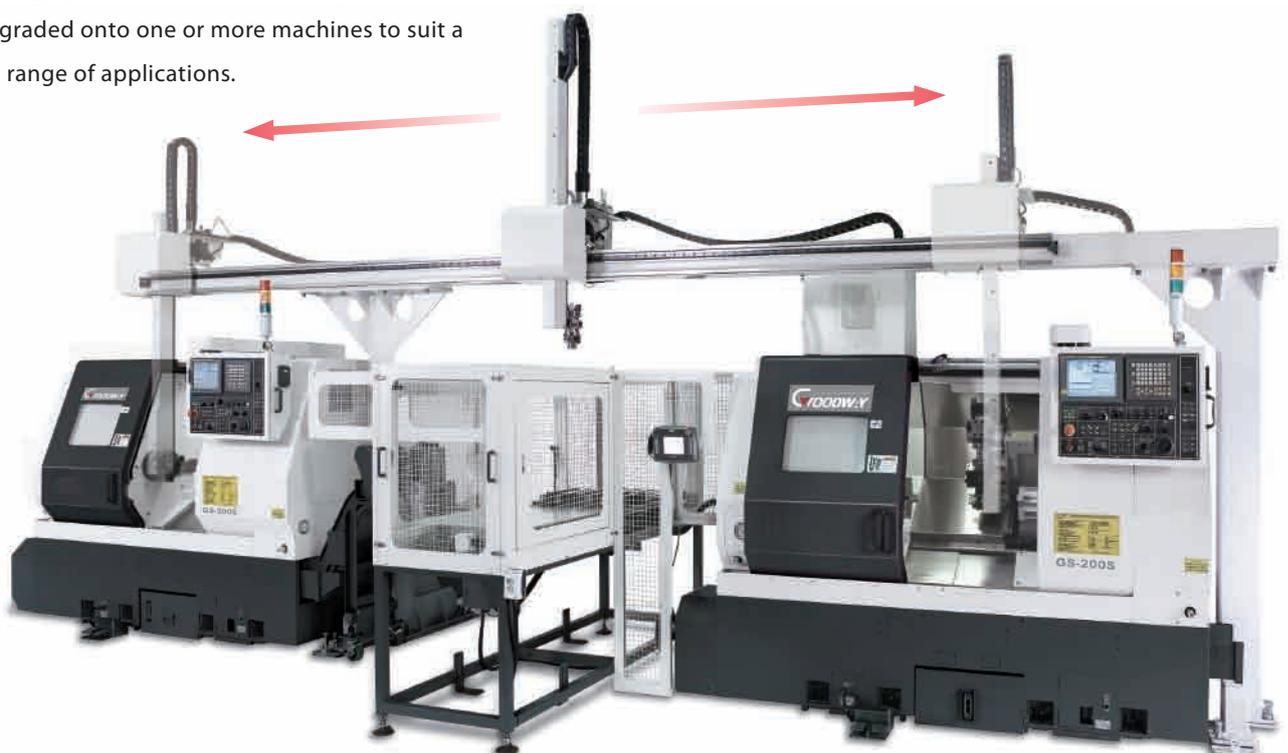

- ▶ Fully automated custom long shaft loading & unloading system mated with GTS-150MMX CNC turning center.

(Loading / Unloading systems with GTS-150MMX Series)

Gantry Loading Systems

- ▶ Available standardized or custom gantry loading / unloading systems provide automatic operation for chucking operations. These flexible systems can be intergraded onto one or more machines to suit a wide range of applications.

(Gantry Loading with GS-200S Series)

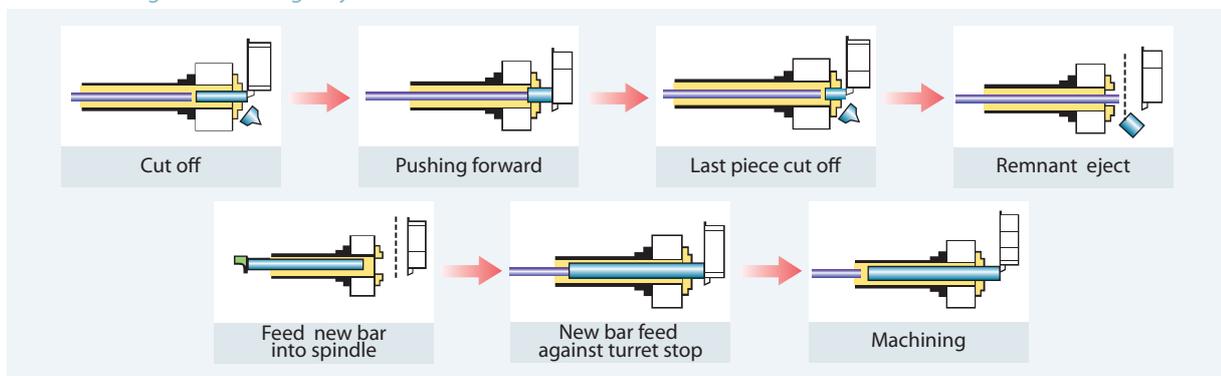

Bar Feeder

Model	BF-65	BF-80
Bar diameters	5 ~ 65 mm (0.19"~2.55")	6 ~ 80 mm (0.23"~3.14")
Maximum bar lengths* ¹	1,220 mm (48")	1,525 mm (60")
Magazine capacity	65 mm (2.55") x 10 bars	80 mm (3.14") x 7 bars
Control / drive type	Mitsubishi / Pneumatic	Mitsubishi / Servo
Foot print	L 63" x D 44"	L 87" x D 57"
Weight	250 Kg (550 lb)	500 Kg (1,100 lb)

*1 Actual bar length limited by total spindle + work piece length (work piece + chuck + spindle + cylinder + rear spindle cover lengths). A bar supporting device must be used if bar extends past the rear spindle cover, otherwise, the bar may bend during machining causing serious machine damage and injury or death to operator.

Bar Feeding & Bar Change Cycle

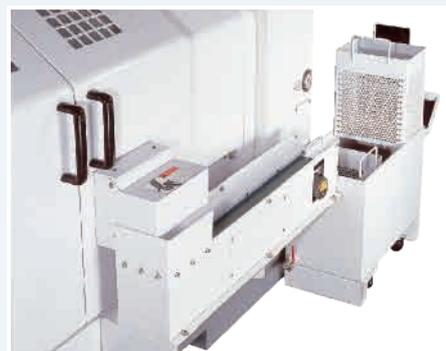

Parts Catchers

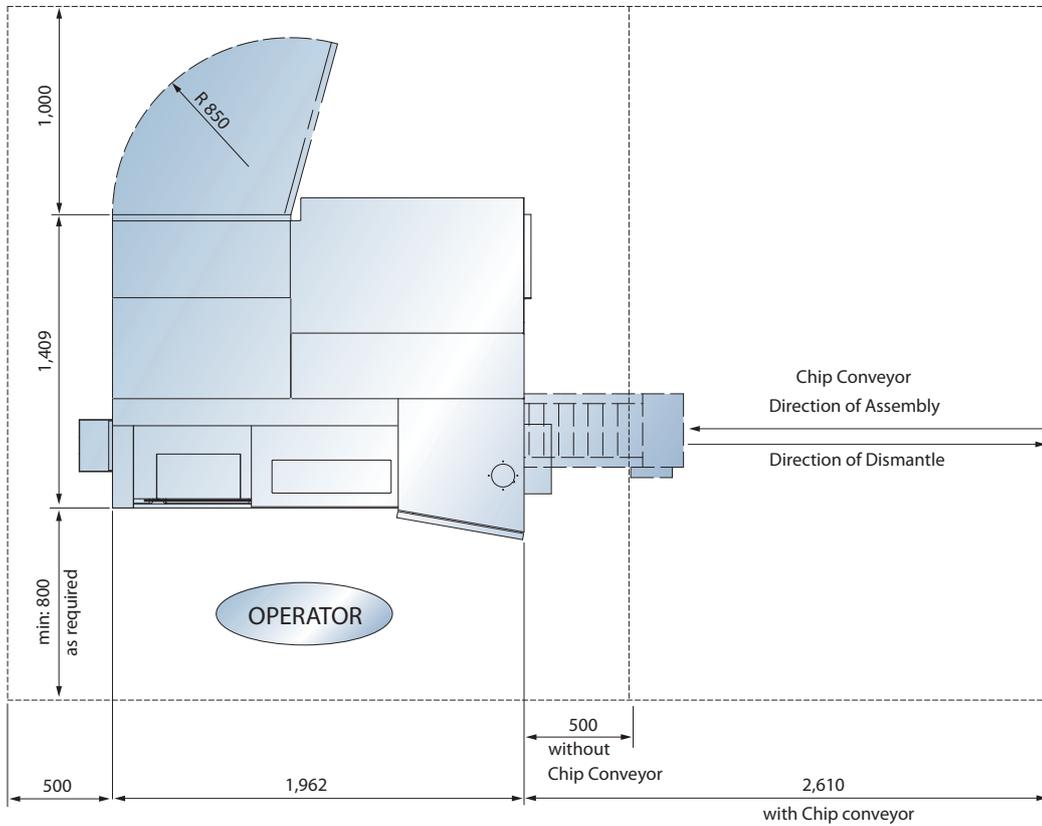

- Optional hydraulic parts catchers can be programmed to catch finished parts after cut-off. Parts conveyor systems are also available.
