

SD / SW SERIES

Maximum Performance SWISS Turning Centers

GOODWAY MACHINE CORP.

MAXIMUM PERFORMANCE SWISS TURNING CENTERS

With leading technology and high quality components. Goodway Swiss Type machine provides the best solution for those work pieces smaller than 32mm. Additional, SD & SW series are not only with super rigid body, faster moving, and variety tooling selection but also available with sub-spindle, live tooling and bar-feeder to accomplish today and tomorrow's most demand.

(SD-16 series model shown.)

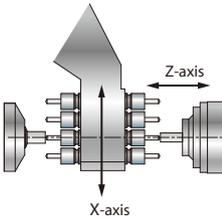

- ▶ Fully enclosed splashguards keep chips and coolant contained for a safe clean working environment.
- ▶ All spindle and servo motors, are FANUC alpha *i* series components to ensure peak machining performance and accuracy.
- ▶ C3 class hardened and precision ground ball screws ensure the highest accuracy and durability possible. Plus, pretension on all axes minimizes thermal distortion.
- ▶ The auto lubrication system delivers metered amounts of lubrication to the slide ways, ball screws, and vital components. Distribution is automatically shut off during idling to prevent waste.
- ▶ Optional high efficient heat exchanger for the electrical cabinet minimizes heat effects and extends the life of the electrical components.

MACHINING VARIATIONS

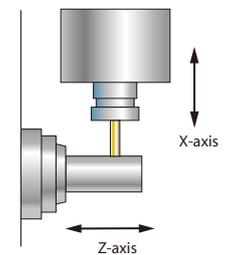

SD-16

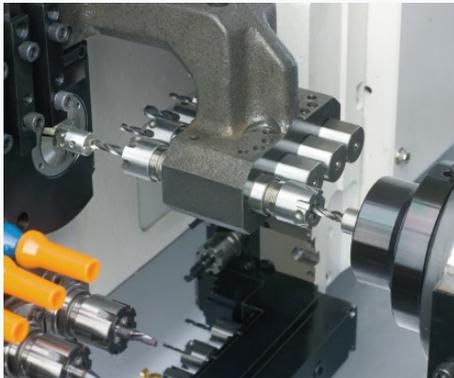

▶ Main & Sub-spindle simultaneous drilling and tapping

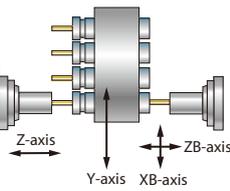

▶ Side milling & tapping

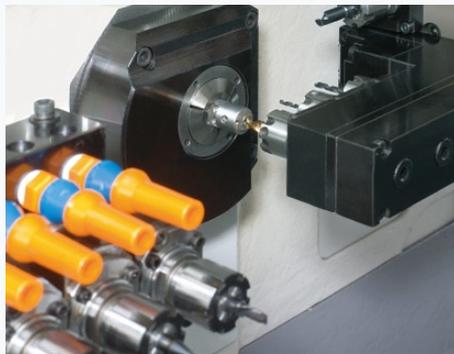

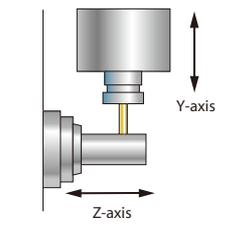

SW-20

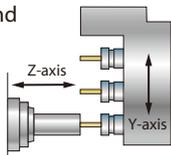

▶ Main & Sub-spindle simultaneous drilling and tapping

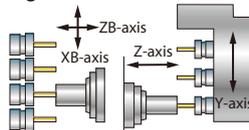

▶ Side milling & tapping

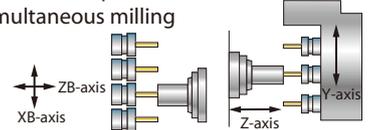

▶ Front offset drilling and tapping

▶ Rear offset drilling and tapping

▶ Main & Sub-spindle simultaneous milling

S: Standard O: Option -: Not Available

SD SERIES TOOL SYSTEM

► SD series is designed with maximum performance, minimum floor space and easy to operation. Also available with live tooling, sub-spindle and C-axis to provide the mostly friendly working condition.

SD-16 Tool System

- O.D. Tool
- I.D. Tool
- Side Live Tool

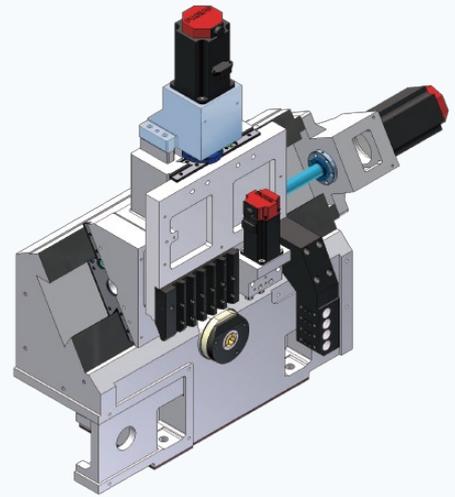

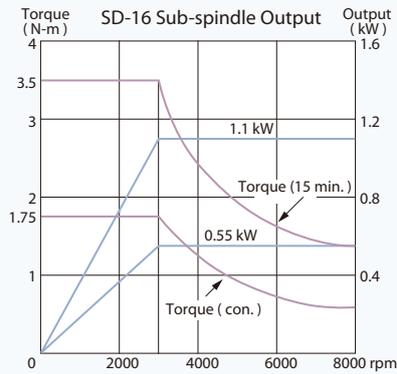

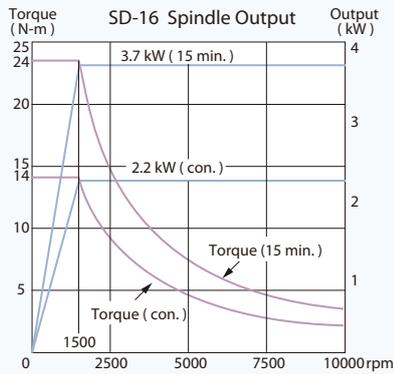

TOOL POST

Standard Tooling System

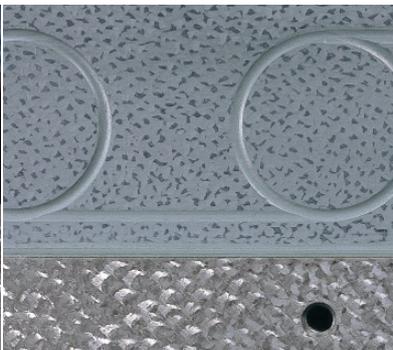

| | |
|------------------------|------------|
| O.D. Tool | 6 |
| Front-end working tool | 4 |
| Rear-end working tool | 4 (Max.) |
| Radial live tool | 2 |

Option Tooling System

| | |
|------------------------|------------|
| O.D. Tool | 5 |
| Front-end working tool | 4 |
| Rear-end working tool | 4 (Max.) |
| Radial live tool | 3 |

- ▶ SD series is design with pneumatic system instead of hydraulic system to achieve our goal that with environment friendly, safety and easy to maintenance.
- ▶ Z-axis is using Japan made high precision linear guide way. It provides high accuracy positioning no matter it is in high or low speed.
- ▶ Except Z-axis, all the guide ways are dovetail box way that made under heat treatment and super high precision grinding. All the slide ways are bonded with Turcite B to eliminate stick-slip, minimize wear and maintain long term accuracy.

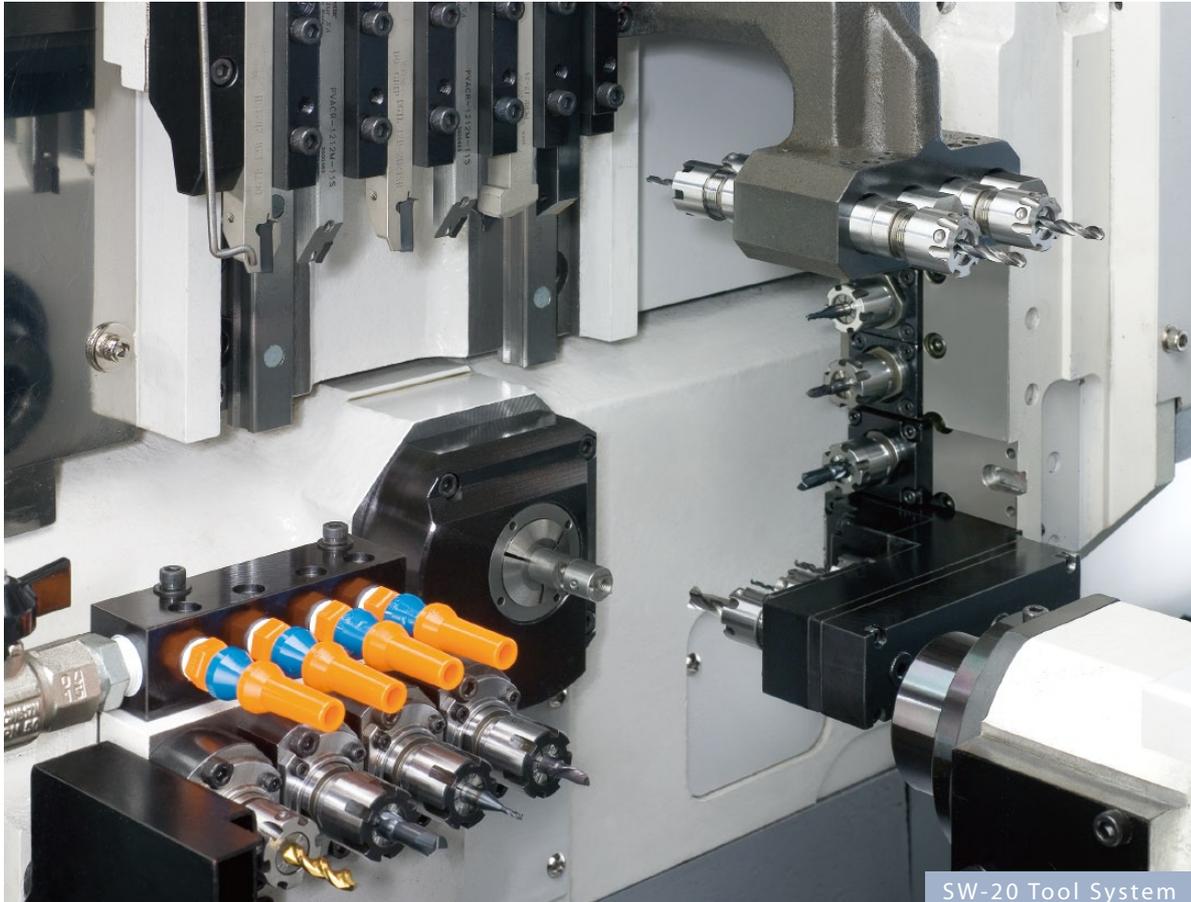

- ▶ Contact surfaces of all slides, headstock, turret, tailstock, and ball screw bearing housings with the machine bed are hand scraped to provide maximum assembly precision, structural rigidity, and load distribution.

- ▶ For top component precision, Goodway utilizes top-end measuring and balancing equipment such as; ZEISS 3D measuring system, Taylor Hobson roundness measuring system, BL high precision dynamic balancer and many more.

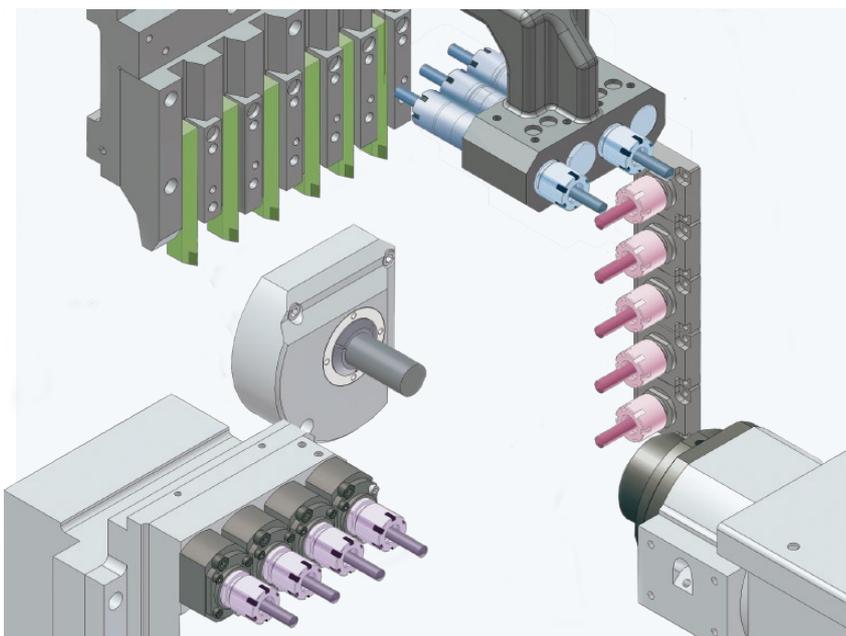

SW SERIES TOOL SYSTEM

- ▶ SW series offers more flexible operations such as turning, milling and cross drilling. From a different combination of power systems, main-spindle, sub-spindle, front-end tool, rear-end tool, C-axis and live tools which means the workpiece can be finished at one time and also allows two operators to be machined simultaneously.

SW-20 Tool System

- O.D. Tool
- I.D. Tool
- Side Live Tool
- Rear Live Tool

TOOL POST

| Front-end Tooling System | |
|--------------------------|--------------------------|
| O.D. Tool | 6 |
| Front-end working tool | 4 |
| Rear-end working tool | 4 |
| Radial live tool | 5 (Max.) ^{*1} |
| Axial live tool | 5 (Max.) ^{*2} |
| Rear-end Tooling System | |
| Rear-end working tool | 4 (Max.) ^{*3} |

^{*1} The upper 3 positions are a fixed unit for milling and drilling and the bottom 2 positions allow variations to be fitted.

^{*2} The bottom 2 positions can be increased up to 5 front-end and 2 rear-end live tools.

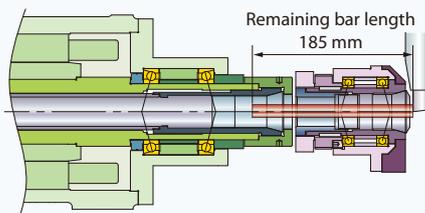

^{*3} Live tools are available.

MODULE SPINDLE CONSTRUCTION

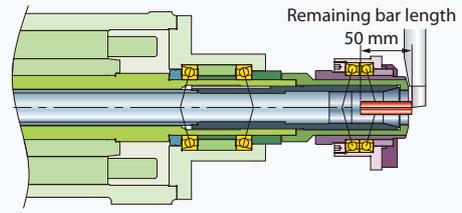

- ▶ Spindle can be exchange to be bush type or bushless type which is depend on different work requirements.
- ▶ The bushless design which is suitable for machining cold forge bar and the remain bar can be less than 50mm to save material cost.
- ▶ The bush type is with guide bush which is direct drive by servo motor and this kind direct drive system can be rotate with high speed which can less surface damage and efficient increase working performance.

(SW-32 only)

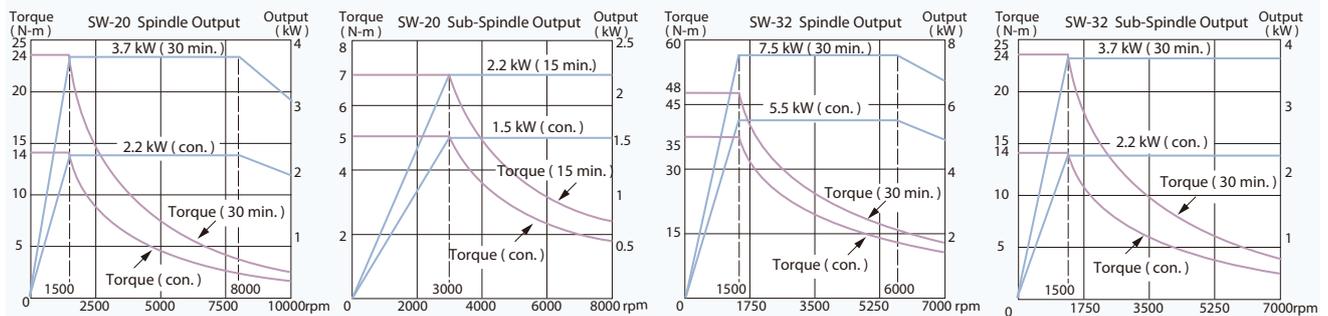

Bush type spindle configuration

Bushless type spindle configuration

Spindle Output

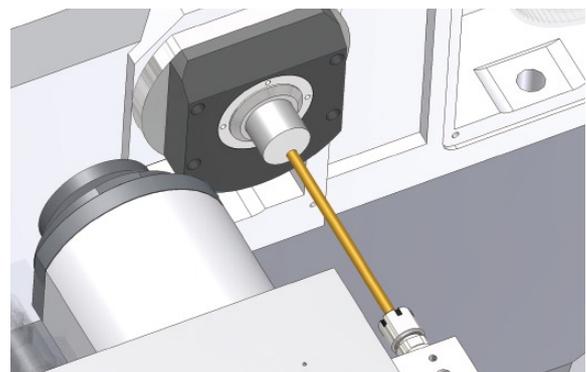

- ▶ SW series machine is standard with Fanuc built-in spindle and C-axis control, which can increase machine stability and increase machining accuracy.
- ▶ The Sub-spindle is also with Fanuc built-in motor and C-axis control, which can be simultaneous with main spindle perfectly to maximum machining accuracy. (SW-32 only)

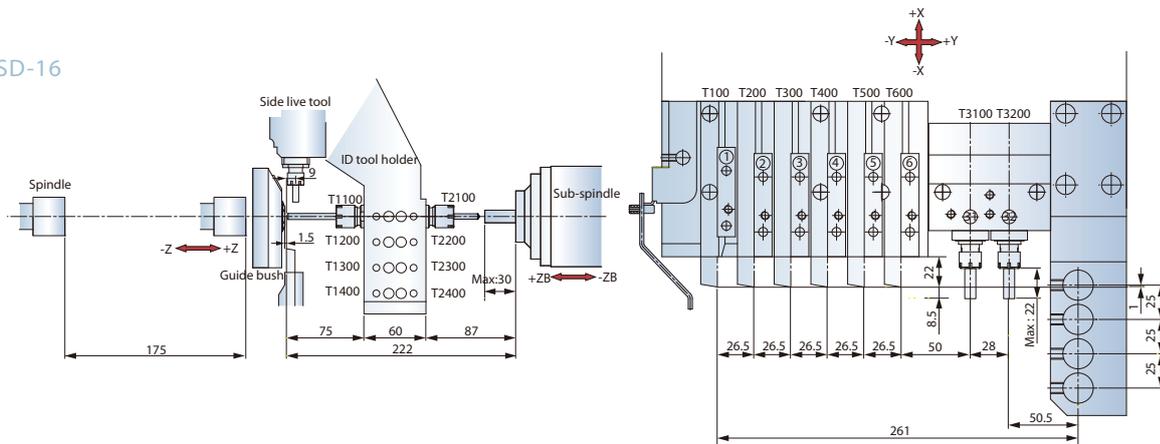

U-Drill Device

- ▶ Sub-spindle applied 2 U-Drill devices which can increase tool number and make tool selection more flexible (SW-32 only)
- ▶ Based on different application, the side rotary toolholder can select different live tool attachment, such as for OD grooving, polygon machining or standard rotary toolholder.
- ▶ All axes are using Japan made high accuracy linear guide way to ensure the most stabilize and provide ultra high performance in moving and positioning. Beside, guide way are pre-load to eliminate any backlash occurs during high speed moving.
